

TYTAN

REVOLUTIONARY REBASING

// Alpha Series Whitepaper

About TYTAN

01

TYTAN is a revolutionary rebase token.

Its own original code combining elements of a rebase token and share token.

We will launch TYTAN along with Orbital Swap on the same day. Having our DEX solves many issues and lays the groundwork for future growth around TYTAN's original code.

Vision

Profits from the DEX will be shared with TYSHARE owners which will be sold later in separate sales. These TYSHARE holders are, in effect, shareholders in Orbital Swap and have unparalleled power and opportunity.

Our goal is to revolutionize DEFI and create projects that can generate income.

The TYTAN System

02

TYTAN will start off with 125,000 APY and have the **LARGEST BURN WALLET OF ANY REBASE TOKEN TO DATE**

3.0% on BUYS

3.5% on SELLS

Afterburner Investment Fund

Our long-term goal is to remain flexible. If we find any opportunities we cannot fund with only the treasury assets, we will ask for a community vote to use the Afterburner funds. Safuu has \$23 million in their Fire Pit. We don't want to kill tokens that we could use for the greater good. We also plan to have a loan and borrow program and make money off the assets in the Afterburner as part of our long term roadmap.

Launchpad

After the launch we will introduce our launchpad, which will include a way for new projects to Fork TYTAN and list on Orbital Swap. We want to become the Swap for all rebase tokens, and plan to invest in several after launch.

We will also have a similar offering to Pinksale for TYTAN and other forks, to raise money directly on Orbital Swap.

We will invest the treasury funds in DeFi and Crypto projects our team believes can grow our treasury rapidly.

Any profits from these projects will be returned back to the treasury as additional backing for TYTAN Tokens.

The TYTAN System

03

Tytan Shares

TYSHARES will be sold after launch.

Basically owning TYSHARES makes you part owners in Orbital Swap. Holders will get 75% of all the fees collected from the DEX, paid in BNB every week.

Lossless Games

TYTAN will have 2 lossless games.

TYTAN TOKEN Game // We will use the rebase over a period of time and have 5-10 winners selected. TYTAN will take a 20% fee from the winners, TYTAN Tokens will be sent to the Afterburner burn wallet.

TYSHARE Games

This is the same as above but instead, you stake your TYSHARES. 2 Winners will split the pool of BNB that would have collected for that week. 20% Tax from the winners will be taken.

The BNB will be set aside to buyback and burn TYTAN.

How TYTAN Works

04

Auto-Compounding

\$TYTAN is the native token in which interest rebase rewards are paid. Every token holder automatically receives rewards interest every 30 minutes, just for holding \$TYTAN tokens in their own wallet.

The Afterburner

LARGEST BURN WALLET OF

ANY REBASE TOKEN:

3.0% on BUYS

3.5% on SELLS

The more that is traded, the more that gets put into the fire causing the Afterburner to grow in size, reducing the circulating supply and keeping the TYTAN protocol stable.

How TYTAN Works

05

Automatic LP

Liquidity Pools are the reason TYTAN is so stable. The larger these pools, the more stable and higher a token can go. This is volume driven; the more volume the better, long term.

4% of the trading fees return to the liquidity pool ensuring \$TYTAN increases collateral value.

Tokenomics of TYTAN

Buy Trading Fees:

4.0% - LP	4.5% - Treasury
2.5% - TIF	3.0% - Afterburner
= 14%	

Sell Trading Fees:

4.0% - LP	4.5% - Treasury
4.0% - TIF	3.5% - Afterburner
= 16%	

The Treasury can be used for buybacks in down turns and invest in other projects, to help create more value to TYTAN Holders.

The treasury and burn wallet address can be used to invest in projects. Burn wallet address funds will have to be voted on by the community to be used in projects. We may also use these burn wallet address funds for loan and borrow programs.

Roadmap

06

Launch TYTAN Tokens

ORBITAL SWAP

Sell TYSHARES

Profits from DEX paid in BNB to TYSHARE Holders weekly

Airdrops to Piggy Finance Holders

Lossless Games

Launchpad

Invest Treasury

Lock your tokens for 30 days for higher APY

Partnerships

Add more TYTAN Forks to ORBITAL SWAP

Additional Games

Loan and Borrow system

TYTAN Partners

07

Given the size and complexity of the TYTAN project, we have several partners including Piggy Finance who have made a sizable investment in our project. We also have several other, well known partners who we will announce during launch and or initial roadmap phases.

Current Partners //

Piggy Finance

TYTAN Fork Foundation

TYTAN Launchpad

08

We understand that TYTAN is going to be the standard for rebase tokens going forward and we want to help to make sure new TYTAN forks are done right. We will work with dev teams to make sure their code is correct. The new TYTAN Forks will have our approval so we limit the outfall of bad actors that plague other forks.

You want your own TYTAN Fork, we are here to help and spread Defi to the world. We will help you setup your own unique TYTAN fork and show you how to operate it correctly.

In exchange for our approval and help we will ask for a percentage of the new TYTAN Forks, we will add these assets to the treasury, thus increasing the backing value of TYTAN Tokens.

This will provide projects with huge benefits and an immediate boost from the TYTAN ecosystem.

Token Allocation

09

Token Allocation //

40 million tokens - Initial Supply

- Pre-sale - 20m
- Initial Liquidity locked for 180 days - 10m
- Seed Investment - 7.04m
- Team Tokens - 2.11m
- PSHARE Allocation - 500k
- YouTube Partners & Giveaways - 236k
- Treasury Allocation for Marketing - 114k
